Before starting a **mass production**, we recommend to make **transfer and washing test** with **all materials**. **Important advice for double-sided printing on textiles:** T-Shirts for a **double-sided print** (front side & backside), has to be put over the lower heat plate. In this case only one side will be treated with heat and you avoid that the applied design from the other side will be pressed out again. If your T-Shirt is yellowing, lay a piece of fleece onto it during the transfer process.
